

Options Strategies

QUICK GUIDE

OIC is providing this publication for informational purposes only. No statement in this publication is to be construed as furnishing investment advice or being a recommendation, solicitation or offer to buy or sell any option or any other security. Options involve risk and are not suitable for all investors. OIC makes no warranties, expressed or implied, regarding the completeness of the information in this

publication, nor does OIC warrant the suitability of this information for any particular purpose. Prior to buying or selling an option, you must receive a copy of Characteristics and Risks of Standardized Options. Copies of this document may be obtained from your broker, from any exchange on which options are traded, by calling 1-888-OPTIONS (678-4667), or by visiting www.888options.com.

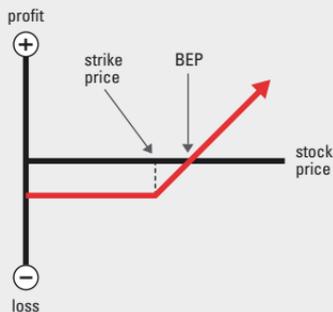

ABOUT OIC

The Options Industry Council (OIC) was created to educate the investing public and brokers about the benefits and risks of exchange-traded options. In an effort to demystify this versatile but complex product, OIC conducts hundreds of seminars throughout the year, distributes educational software and brochures, and maintains a Web site focused on options education. OIC was formed in 1992. Today, its sponsors include the American Stock Exchange, the Chicago Board Options Exchange, the International Securities Exchange, the Pacific Exchange, the Philadelphia Stock Exchange and The Options Clearing Corporation. These participants have one goal in mind for the options investing public: to provide a financially sound and efficient marketplace where investors can hedge investment risk and find new opportunities for profiting from market participation. Education is one of many factors that assist in accomplishing that goal.

HOW TO USE THIS BOOK

Each strategy has an accompanying graph showing profit and loss at expiration.

- The vertical axis shows the profit/loss scale.
- When the strategy line is below the horizontal axis, it assumes you paid for the position or had a loss. When it is above the horizontal axis, it assumes you received a credit for the position or had a profit.
- The dotted line indicates the strike price.
- The intersection of the strategy line and the horizontal axis is the break-even point (BEP) not including transaction costs, commissions, or margin (borrowing) costs.
- These graphs are not drawn to any specific scale and are meant only for illustrative and educational purposes.
- The risks/rewards described are generalizations and may be lesser or greater than indicated.

Bull Strategies

bull strategy | LONG CALL

Example: Buy call

Market Outlook: Bullish

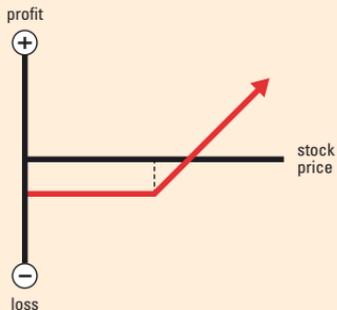

Risk: Limited

Reward: Unlimited

Increase in Volatility:
Helps position

Time Erosion: Hurts position

BEP: Strike price plus
premium paid

bull strategy | BULL CALL SPREAD

Example: Buy 1 call;
sell 1 call at higher strike

Market Outlook: Bullish

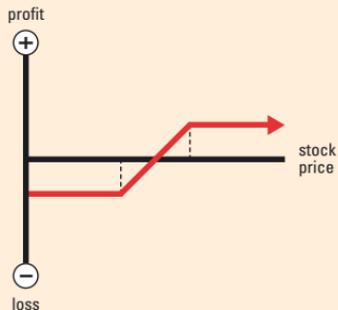

Risk: Limited

Reward: Limited

Increase in Volatility: Helps or hurts depending on strikes chosen

Time Erosion: Helps or hurts depending on strikes chosen

BEP: Long call strike plus net premium paid

bull strategy | CALL BACKSPREAD

Example: Sell 1 call;
buy 2 calls at higher strike

Market Outlook: Very bullish

Risk: Limited

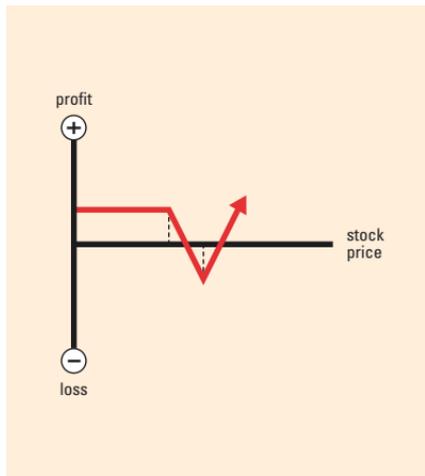

Reward: Unlimited

Increase in Volatility:
Typically helps position

Time Erosion:
Typically hurts position

BEP: Two BEPs

1. Short call strike plus net premium received
2. Long call strike plus net premium received

bull strategy | COVERED CALL/BUY WRITE

Example: Buy stock; sell calls on a share-for-share basis

Market Outlook: Neutral to slightly bullish

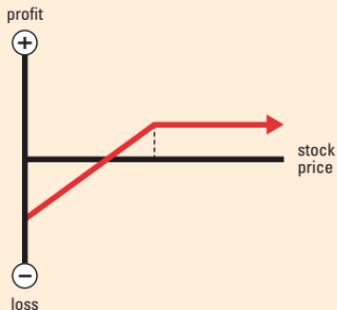

Risk: Limited, but substantial (risk is from a fall in stock price)

Reward: Limited

Increase in Volatility:
Hurts position

Time Erosion: Helps position

BEP: Starting stock price minus premium received

bull strategy | PROTECTIVE/MARRIED PUT

Example: Own 100 shares of stock; buy 1 put

Market Outlook: Cautiously bullish

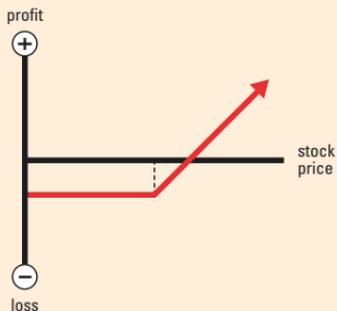

Risk: Limited

Reward: Unlimited

Increase in Volatility:
Helps position

Time Erosion: Hurts position

BEP: Starting stock price plus premium paid

bull strategy

CASH-SECURED SHORT PUT

Example: Sell 1 put; hold cash equal to strike price x 100

Market Outlook: Neutral to slightly bullish

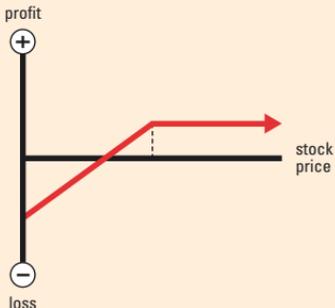

Risk: Limited, but substantial

Reward: Limited

Increase in Volatility:
Hurts position

Time Erosion: Helps position

BEP: Strike price minus premium received

bull strategy

BULL SPLIT-STRIKE COMBO

Example: Buy 1 call;
sell 1 put at lower strike

Market Outlook: Bullish

Risk: Limited, but substantial

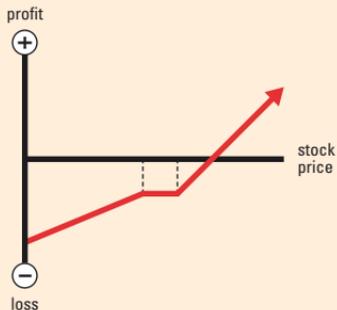

Reward: Unlimited

Increase in Volatility: Typically
helps position

Time Erosion: Typically
hurts position

BEP: Two BEPs

1. Long call plus premium paid
2. If established at a credit, short put minus premium received

Note: This strategy is similar to a Synthetic Long Stock when the strikes are identical.

bear strategy | LONG PUT

Example: Buy put

Market Outlook: Bearish

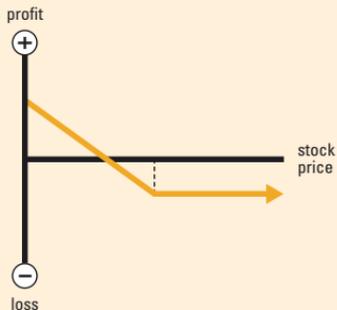

Risk: Limited

Reward: Limited, but substantial

Increase in Volatility:
Helps position

Time Erosion: Hurts position

BEP: Strike price minus
premium paid

bear strategy | BEAR PUT SPREAD

Example: Sell 1 put;
buy 1 put at higher strike

Market Outlook: Bearish

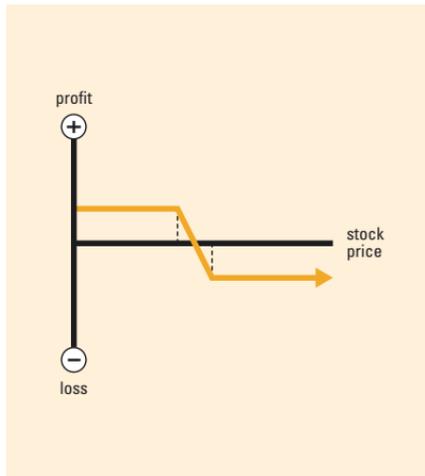

Risk: Limited

Reward: Limited

Increase in Volatility:
Helps or hurts depending on
strikes chosen

Time Erosion: Helps or hurts
depending on strikes chosen

BEP: Long put strike minus
net premium paid

bear strategy | PUT BACKSPREAD

Example: Sell 1 put;
buy 2 puts at lower strike

Market Outlook: Bearish

Risk: Limited

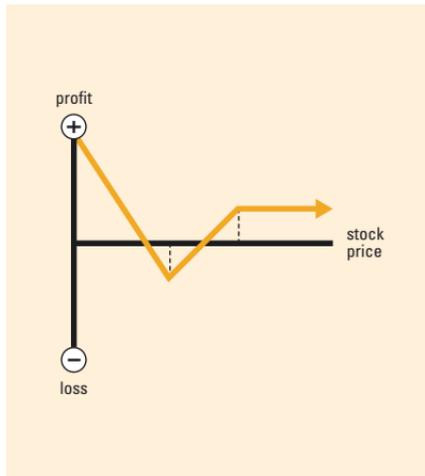

Reward: Limited, but substantial

Increase in Volatility: Typically
helps position

Time Erosion: Typically
hurts position

BEP: Two BEPs

1. Short put strike minus
premium received
2. Long put strike minus
maximum risk

bear strategy

BEAR SPLIT-STRIKE COMBO

Example: Buy 1 put;
sell 1 call at higher strike

Market Outlook: Bearish

Risk: Unlimited

Reward: Limited, but substantial

Increase in Volatility: Neutral

Time Erosion: Neutral

BEP: Two BEPs

1. Short call strike plus net
premium received

or

2. Long put strike minus net
premium paid

Note: This strategy is similar to a Synthetic Short Stock, if established at a debit.

Neutral Strategies

neutral strategy | COLLAR

Example: Own stock, protect by purchasing 1 put and selling 1 call with a higher strike

Market Outlook: Neutral

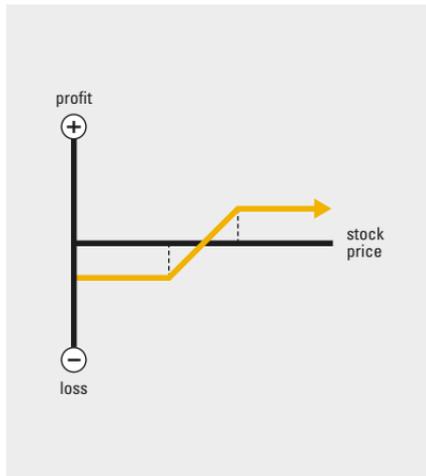

Risk: Limited

Reward: Limited

Increase in Volatility: Effect varies, none in most cases

Time Erosion: Effect varies

BEP: In principle, breaks even if, at expiration, the stock is above/(below) its initial level by the amount of the debit/(credit)

neutral strategy | SHORT STRADDLE

Example: Sell 1 call;
sell 1 put at same strike

Market Outlook: Neutral

Risk: Unlimited

Reward: Limited

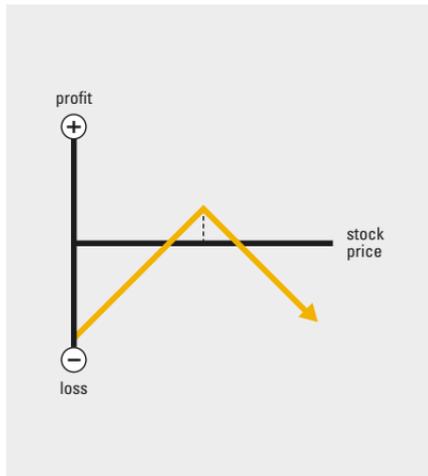

Increase in Volatility:

Hurts position

Time Erosion: Helps position

BEP: Two BEPs

1. Call strike plus premium received
2. Put strike minus premium received

neutral strategy | LONG STRADDLE

Example: Buy 1 call;
buy 1 put at same strike

Market Outlook: Large move
in either direction

Risk: Limited

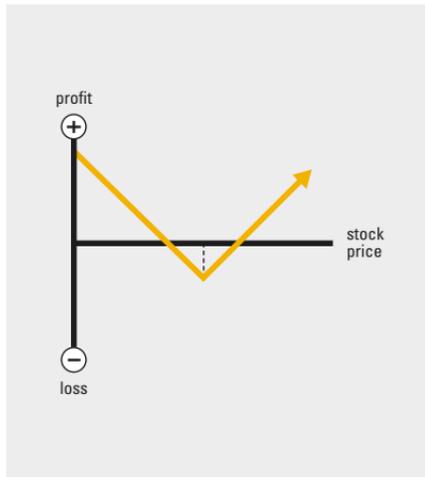

Reward: Unlimited

Increase in Volatility:
Helps position

Time Erosion: Hurts position

BEP: Two BEPs

1. Call strike plus premium paid
2. Put strike minus premium paid

neutral strategy | LONG STRANGLE

Example: Buy 1 call;
buy 1 put at lower strike

Market Outlook: Large move
in either direction

Risk: Limited

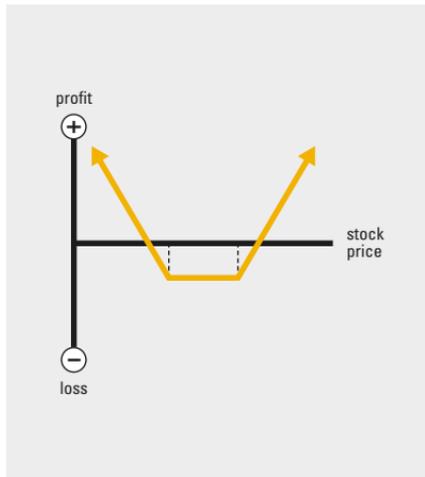

Reward: Unlimited

Increase in Volatility:
Helps position

Time Erosion: Hurts position

BEP: Two BEPs

1. Call strike plus premium paid
2. Put strike minus premium paid

neutral strategy | SHORT STRANGLE

Example: Sell 1 call;
sell 1 put at lower strike

Market Outlook: Neutral

Risk: Unlimited

Reward: Limited

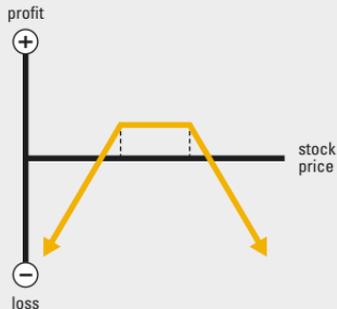

Increase in Volatility:

Hurts position

Time Erosion: Helps position

BEP: Two BEPs

1. Call strike plus premium received
2. Put strike minus premium received

neutral strategy | RATIO SPREAD WITH CALLS

Example: Buy 1 call;
sell 2 calls at higher strike

Market Outlook: Neutral to
slightly bullish

Risk: Unlimited

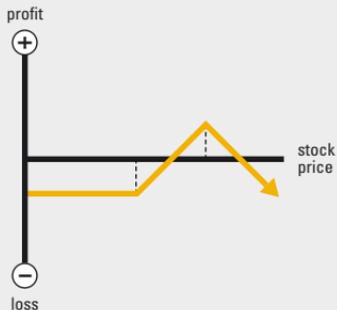

Reward: Limited

Increase in Volatility: Typically
hurts position

Time Erosion: Typically helps
position

BEP: Two BEPs

1. Long call strike plus/(minus)
net premium paid/(received)
2. Short calls strike plus the
maximum profit potential

The maximum profit potential is limited to the difference between the strikes plus/(minus) the premium received/(paid).

neutral strategy | LONG CALL BUTTERFLY

Example: Sell 2 calls;
buy 1 call at next lower strike;
buy 1 call at next higher strike
(the strikes are equidistant)

Market Outlook: Neutral around
strike

Risk: Limited

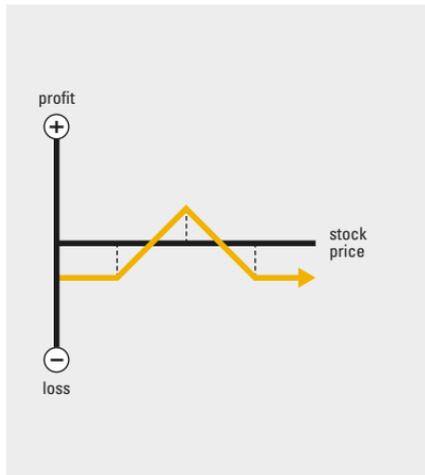

Reward: Limited

Increase in Volatility:
Typically hurts position

Time Erosion: Typically helps position

BEP: Two BEPs

1. Lower short call strike plus
net premium paid
2. Higher short call strike minus
net premium paid

Glossary

Break-Even Point (BEP): The stock price(s) at which an option strategy results in neither a profit nor loss.

Call: An option contract that gives the holder the right to buy the underlying security at a specified price for a certain, fixed period of time.

In-the-money: A call option is in-the-money if the strike price is less than the market price of the underlying security. A put option is in-the-money if the strike price is greater than the market price of the underlying security.

Long position: A position wherein an investor is a net holder in a particular options series.

Out-of-the-money: A call option is out-of-the-money if the strike price is greater than the market price of the underlying security. A put option is out-of-the-money if the strike price is less than the market price of the underlying security.

Premium: The price a put or call buyer must pay to a put or call seller (writer) for an option contract. Market supply and demand forces determine the premium.

Put: An option contract that gives the holder the right to sell the underlying security at a specified price for a certain, fixed period of time.

Short position: A position wherein the investor is a net writer (seller) of a particular options series.

Strike price or exercise price: The stated price per share for which the underlying security may be purchased (in the case of a call) or sold (in the case of a put) by the option holder upon exercise of the option contract.

Synthetic position: A strategy involving two or more instruments that has the same risk/reward profile as a strategy involving only one instrument.

Time decay or erosion: A term used to describe how the time value of an option can “decay” or reduce with the passage of time.

Volatility: A measure of the fluctuation in the market price of the underlying security. Mathematically, volatility is the annualized standard deviation of returns.
